

Safety Management Services Company Partners with Haul Compliance

Is Your Fleet Prepared?

- Could your company withstand potential litigation after a serious crash from a FMCSA/DOT regulatory perspective?
- Would you confidently pass an FMCSA/DOT Compliance Investigation?
- What if you could monitor your compliance status in real-time?

For many motor carriers, managing FMCSA/DOT compliance is a constant and intimidating process.

Safety Management Services Company (SMSC), Cottingham & Butler's safety consulting company, has partnered with Haul Compliance, a leading fleet compliance software provider, to offer clients access to Haul's AI-driven platform which centralizes fleet management across compliance, maintenance, and safety.

Through this collaboration, our solution will help motors carriers manage:

- Driver qualification files
- Vehicle maintenance records
- FMCSA/DOT compliance requirements

Two Flexible Service Offering Options: Managed Services and Self-Service:

1

Managed Services

SMSC will work with your company's team to provide guidance when onboarding your documents into the system, offer continuous monitoring of the system to help ensure your team is keeping current with due dates for required documents and being a resource for your team for FMCSA/DOT compliance questions.

2

Self-Service option

SMSC will work with your company's team to provide guidance when onboarding your documents into the system, and after implementation, your company's team will be responsible for managing FMCSA/DOT compliance within the system.

When considering partnering with SMSC and Haul Compliance, a motor carrier should consider these benefits:

Reduced Administrative Burden

Streamlined compliance tasks with notifications for critical documents updates.

Improved Safety & Compliance

Reduced exposure to fines, penalties, and litigation risks.

Enhanced Efficiency

Fully digital driver onboarding and file management, eliminating the use of paper.

Peace of Mind

Confidence that your fleet's driver and maintenance files are current and properly managed.
